

§ Myth or Fact § about Polyethylene Products 03: Anti-Slip

28.Jun.2026

Myth or Fact ?

“The involves applying a diamond-cut or embossed finish to the surface of polyethylene products to provide a non-slip effect.

The Fact is:

- The expected anti-slip effect was not achieved.

This led to further problems.:

- Dust and dirt began to accumulate more easily, making cleaning more time-consuming.
- Seawater collecting in the grooves became a source of dirt and odours.

The Countermeasure Method:

- Apply Anti-Slip Paint on the Polyethylene products surface.

How to apply Anti-Slip Paint on the Polyethylene Products Surface:

- ✓ Apply PaintFlex® Liquid Paint on the Polyethylene products surface. (Using PaintFlex® Paint as a paint promoter.)
- ✓ Apply Ordinal Anti-Slip Paint on the PaintFlex® Painted Surface.
Note: PaintFlex® be Applied **without** heat / Flame / corona and other treatment
- ✓ PaintFlex® and Ordinal Anti-Slip Paint be Applied **with** ordinal equipment
 - Spray. • Brush. • Roller

Conventional Anti-Slip Paint

PaintFlex® Classic
