Marking Course lines
on a stainless steel swimming pool using PaintFlex®

PaintFlex® is the liquid paint that can be applied directly to the surface of polyethylene & other hard to paint products.

11.Sep.2026

PaintFlex® Black can be used directly to mark highly durable Course lines on stainless steel swimming pools.

Apply & Photo: 2019

Most swimming pools use chlorinated water for sanitary reasons.

PaintFlex offers two key characteristics:

- it can be applied directly to stainless steel without the need for surface preparation like sanding,
- and it is resistant to the chlorinated water found in swimming pools.

Given these qualities, PaintFlex is the ideal choice for applying durable lane markings to stainless steel pools.
